Abstract of NZ336782

system for publishing electronic information includes predefined portions of data, with each predefined portion being encoded with at least one linking means. Each predefined portion is stored, and where a predefined portion has been modified, each modified portion predefined portion is stored. The system also has attributes, which are points on an axis of a multidimensional space for organizing the data. The predefined portions of data may be encoded using SGML or XML. The data may also be encoded using one or more Document Type Definitions (DTD) or Style Sheet Mechanisms (SSM).
